

Hoppers, Ancillary Components, Services & Complete Systems

Locker offer full measuring, design, fabrication and installation services

Locker not only design and supply feeders and conveyors but also the relevant ancillary components / equipment. This includes; Hopper assemblies, Feeder interfaces, Rod gates and discharge chutes. We offer a full bespoke service from site measuring, design, fabrication and installation on request.

Offering full and complete services / solutions

Locker go beyond simply designing and supplying vibrating feeders and hoppers. Our engineering services include site surveying, structural support steelwork, hopper systems, interfaces, rod gates, ancillary components and where required, installation services.

Combining decades of Locker vibration experience with the design and engineering background of the Wright Group, provides Locker Wright Ltd a key advantage over our competitors.

Our facilities and experience give us the ability to engineer full solutions for our customers – meaning fewer suppliers and more streamlined projects.

Services

- Process review and machine design
- Site Surveying
- Support structure design
- Fabrication
- Hoppers
- Rod gates
- Feeder interfaces
- Installation
