

# Tube Conveyors

## Locker Electro Magnetic and Electro Mechanical Tube Conveyors

Tube Conveyors are ideally suited in circumstances where fully enclosed feeding and/or conveying of materials is required. In addition to our fully enclosed open pan conveyors and feeders, Locker also design and manufacture tubular conveyors in both Electro Magnetic and Electro Mechanical arrangements.

### Electro Magnetic & Electro Mechanical arrangements

Locker Tube Conveyors and Feeders are available in both Electro Magnetic and Electro Mechanical arrangements – to suit individual client requirements and constraints. We design and fabricate our conveyors in house and offer a range of construction materials including high quality carbon steel and 304/316 grade stainless steel.

Our Tube Conveyors are available fully ATEX rated and in single lengths of up to 6m – additional length conveyance can be achieved by utilising several units.

Incorporating years of experience in the field of vibrating feeders and conveyors, Locker have put vibration to work at new levels of improved efficiency.

Our robust designs, many and varied configurations and UK based sales, manufacture, service and parts supply ensure Locker has the solution for you.

### Advantages

- ATEX rating available
- Fully sealed
- Feed lengths of up to 6m with a single unit
- Reliable and Robust
- Removable end plates for inspection and cleaning
- Local or remote control options
- 0-100% control of flow available
- Suspended or foot mounted
- Wide range of throughputs
- Bespoke machine designs
- Low maintenance
