

Vibrating Conveyors

Locker Electro Magnetic and Electro Mechanical Vibrating Conveyors

Locker offer a range of vibrating conveyor equipment with options for both Electro Magnetic and Electro Mechanical drive mechanisms – featuring the inherent advantages of each. Typical Locker reliability and bespoke units to suit individual requirements. Contact us for full details on Locker Vibrating Conveyors / options.

Electro Magnetic & Electro Mechanical arrangements

Locker Vibrating Conveyors are available in both Electro Magnetic and Electro Mechanical arrangements – to suit individual client requirements and constraints. We design and fabricate our conveyors in house and offer a range of construction materials including high quality carbon steel and 304/316 grade stainless steel.

Our range of Vibrating Conveyors are equipped with easily replaceable wear liners in a range of materials – including stainless, AR400 and Chrome Carbide plate. Locker Vibrating Conveyors are available fully ATEX rated and in single lengths of up to 6m. Additional length conveyance can be achieved by utilising several units.

Incorporating years of experience in the field of vibrating feeders and conveyors, Locker have put vibration to work at new levels of improved efficiency.

Our robust designs, many and varied configurations and UK based sales, manufacture, service and parts supply ensure Locker has the solution for you.

Advantages
